AMPIRE WFS400 for RHD vehicles

If the immobilizer, in the car in which you install it, is armed not when the driver´s door is opened, but when the passenger door is opened, you can "swap" the doors in the software. To do this, enter the program number for the particular car, then enter program number 11981. This could be done with CAN switch and CAN LED, as well as with BL600 programming tool. It´s important that the vehicle specific program number is set first, and after that 11981 is set.

The return to the standard door recognition occurs when the program number for the particular car is set again.

Device software should be 2020-11-04 or newer.
