AMPIRE WFS400 for 2020 Fiat Ducato and identical vehicles

If you do not want the immobilizer to be deactivated only after unlocking the vehicle with the key FOB, this can be deactivated in the software. To do this, enter the program number for the particular car, then enter program number 23986. This could be done with CAN switch and CAN LED, as well as with BL600 programming tool. It´s important that the vehicle specific program number is set first, and after that 23986 is set.

The function is reactivated by saving the vehicle-specific program number again!

Device software should be 2022-01-12 or newer.
